Retail Display Panels

PVC 4-Pack Installation Instructions

1. PVC panels need to be mounted to a solid, firm surface. Open studs are not recommended.
2. Determine location where PVC panels will be installed. Use a level to draw a straight line at desired height.
3. When installing over drywall use a stud finder to mark the center of each stud on the pre drawn level line.
4. Use correct length screws to attach PVC panel to the wall, screwing through the grooves (see Illustration A below). Due to the uniqueness of each installation, **fastening screws are not included.**
5. If cutting is required, cut wall panels with a power saw. The saw blade should enter the finished side of the wall panels (back side of PVC panel is facing up).

TIP: Mount PVC panels to a solid wall surface. It is not recommended to mount PVC panels to open studs.

TIP: Use a color-matched pan head stye screw for best holding and visual results.
