

Anchor™Core FIREWALLFR®

Boise Cascade has engineered Anchor™Core FIREWALLFR® to meet the heightened protection requirements for your commercial, institutional, residential and retail display slatwall projects — well-suited for hospitals, libraries, schools, government-related buildings.

Anchor™Core FIREWALLFR® is certified with Class 1/Class A fire-rated properties.

Description

An engineered composite panel wood product made from 100% recycled Ponderosa pine and associated species of western wood particles formed and bonded with an interior resin. Meets ANSI requirements for MR10, which allows for added protection against occasional wetting and high humidity.

Extensive testing determines ANCHOR™Core is up to 50% stronger than standard medium density fiberboard (MDF) in slatwall applications.

Information and sample request

For more information, or to request a sample, visit: http://windmillslatwall.com/request_sample.asp or call 800.548.7528 to speak with a Project Manager.
